- Performing tasks that are not included in the maintenance service as defined, and the development of changes and improvements to the system, will incur an hourly cost of 220 NIS per working hour, according to actual hours worked.

# Ongoing update service for WordPress and the applicative infrastructure

Since WordPress is the most popular website management system in the world, it frequently undergoes changes, including plugins, improvements, and closing security loopholes. To maintain the website's ongoing updates in terms of technology and to preserve its data protection level, it is recommended to update the version of WordPress on which the site is installed regularly. In instances where this is required, it is recommended to update the remainder of the site's infrastructure as well. Most ongoing updates include the WordPress version and the plugins installed on the site. Periodically, there may also be upgrades that also include the applicative infrastructures: Apache, MySQL, and PHP.

**Updating Process**

- Establishing an environment compatible with a production environment on realcommerce's development servers.
- Copying the site from the production to realcommerce's servers.
- Upgrading the infrastructure on realcommerce's servers.
- Extensive testing of the site and of the management system.
- Repairing code and replacing plugins as necessary.
- Uploading the upgraded site onto a testing environment.
- Moving the upgraded site for a round of acceptance testing.
- Coordinating a date for upgrading the infrastructures on the production server with the client.
- Upgrading the server and uploading the updated site.
- Integrity testing in the production environment and going live.

**The cost of the services listed above is calculated according to actual hours worked at a rate of 220 NIS per hour worked.**
